1. General Info And Instalation

I. About

Jukebox is Responsive Modern Music and Band template, With useful features make jukebox the perfect templates for your band or your music group

II. Getting template online

1. It's important to understand that you must either have your own server space or use someone elses. The server space can be purchased at many different places around the internet. You need somewhere to put the files that you purchased so others can find them online.
2. The template folder will have several files with the extension labeled .html. This is where all your content will. It's very important to keep the css and js-plugin folders with the HTML or the HTML will not look how the design is meant to look. Along with the HTML files, you will also have four additional folders to upload: css, js, fonts, and images.
3. Start your FTP client (I persoanlly use Filezila which is free) and login. Login to your server. You will need your server name (often times this will be your domain name), username, and password that you setup with the hosting company.

2. Add Your Logo and Favicon

I. Add your logo

To change the logo you can simply follow this step

1. Resize Your logo to 120x25 (recommended) and convert it to PNG file type.
2. Go to **assets/images/** folder
3. Rename your logo to logo-dark.png , Replace the current logo-dark.png

II. Add your favicon

To change the favicon You just simply replace the favicon.png on assets/images with your favicon

3. Setup Google Map

I. Event Single Page

To change the map location on the event single page you can follow this step

1. Open the ***event-single.html*** file
2. Go to **line 389** and replace the latitude and longitude value, with your generated latitude and longitude address . Read more about latitude and longitude at <https://support.google.com/maps/answer/18539>

```
var myLatLng = new google.maps.LatLng(-6.899669, 107.618484);
```

NOTE: latitude and longitude value in the example is -6.899669 and 107.618484

II. Contact Page

To change the map location on the event single page you can follow this step

1. Open the ***assets/javascripts/custom-map.js*** file
2. Go to **line 6** and replace the latitude and longitude value, with your generated latitude and longitude address . Read more about latitude and longitude at <https://support.google.com/maps/answer/18539>

```
var myLatLng = new google.maps.LatLng(40.6700, -73.9400);
```

NOTE: latitude and longitude value in the example is 40.6700, and -73.9400

4. Setup Google Map

To add your custom media player list on index and album single page, and add the featured song on index page's main banner you must to do this

I. Index Page's Main Banner Featured Song

To change the featured song on index page's main banner

1. Go to line 1006 on **index.html**
2. Replace the mp3 song URL with your song url , don't forgot to place it inside the quotation mark "".

II. Index Page's Discography song lists

To change the discography song lists on index page

1. Go to bottom line of **index.html** page (the script begin at 1021)
2. Find the script like this

```
{
    title:"Cro Magnon Man",
    mp3:"http://www.jplayer.org/audio/mp3/TSP-01-Cro_magnon_man.mp3",
    oga:"http://www.jplayer.org/audio/ogg/TSP-01-Cro_magnon_man.ogg"
}
```
3. Change the title with your song title, change the mp3 / ogg (optional) URL with your song URL.
4. Don't forgot to place it inside the quotation mark "".

III. Album Single Page song lists

To change the discography song lists on album single page.

1. Go to bottom line of **album-single.html** page (the script begin at 422)
2. Find the script like this

```
{
    title:"Cro Magnon Man",
    mp3:"http://www.jplayer.org/audio/mp3/TSP-01-Cro_magnon_man.mp3",
    oga:"http://www.jplayer.org/audio/ogg/TSP-01-Cro_magnon_man.ogg"
}
```
3. Change the title with your song title, change the mp3 / ogg (optional) URL with your song URL.
Don't forgot to place it inside the quotation mark "".

5. Setup Contact Form

How to change the email address to which emails are sent from the contact form?

Find in contact.php: \$address = 'hello@email.com';

There you can enter your email address. A few lines further down, you can also change the text which is displayed in the email.

6. Add Custom media on the blog masonry page

I. Adding Custom Video

1. To do this you must have video with .mp4 and/or .webm format then
2. Locate **assets/videos/**
3. Paste your video there.
4. Add the video to the page with this code

```
<video controls>
  <source src="assets/videos/your-video-name.mp4" type="video/mp4">
  <source src="assets/videos/ your-video-name.webm" type="video/webm">
  Your browser does not support the video tag.
</video>
```

NOTE: I Recommend you have .webm format video too because several browser cant play mp4 format

II. Adding Custom Audio

1. To do this you must have audio with .mp3 and/or .ogg format then
2. Locate **assets/audio/**
3. Paste your video there.
4. Add the video to the page with this code

```
<audio controls>
  <source src="assets/audios/your-audio-name.ogg" type="audio/ogg">
  <source src="assets/audios/your-audio-name.mp3" type="audio/mpeg">
```

Your browser does not support the audio element.
</audio>

NOTE: I Recommend you have .ogg format audio too because several browser cant play mp3 format

7. Add Custom banner on pages

I. Index Page

1. To do this you must have images with the resolution size is same with the size of the placeholder images (size of the placeholder images are displayed on each placeholder images).
2. Locate **assets/images/**
3. Paste your banner there.
4. Replace the banner1.jpg, banner2.jpg, banner-3.jpg with your custom images.

NOTE:

- a. *banner1.jpg* & *banner2.jpg* is used for main banner (top) and background of event list on index page
- b. *banner3.jpg* is used for background of latest images on index page.

II. Another Page

1. To do this you must have images with the resolution size is same with the size of the placeholder images (size of the placeholder images are displayed on each placeholder images).
2. Locate **assets/images/**
3. Paste your banner there.
4. Replace the banner-title1.jpg, banner-title2.jpg, banner-title3.jpg, banner-title4.jpg with your custom images.

NOTE:

- a. *banner-title1.jpg* is used for all event pages.
- b. *banner-title2.jpg* is used for all album pages.

- c. *banner-title3.jpg* is used for all gallery pages.
- d. *banner-title4.jpg* is used for all blog pages and about page.
